Autonomia

## **Inclusive Society: More independence in our surrounding!**

**Trade show, conferences and panels**

**October 13<sup>th</sup> 2016, Club de Golf de Sherbrooke**

Mrs, Mr.,

The demographic trend brings societies to rethink their structure toward elder care and loss of independence. This has become a major concern, as much as environmental challenges or public health, and a turning point to adapt to tomorrow's living. It is no longer just a matter of having a longer life expectancy but to make sure this added time is more enjoyable. People in loss of independence cannot be put aside but must be wholly included in our every day's life and should have the opportunity to socially participate. The word Inclusive is resonating more and more to define the society we wish to become and which is accessible to everyone. To accomplish so, society must make changes and adapts the surrounding, its ways and practices, so someone's challenges is not an obstacle to happiness, integrity and dignity.

SAGE-Innovation was founded to help economic development of companies developing solutions that support loss of independence. In 2014, the first Autonomia event was held and attracted more than 140 visitors, from clinical, research, community services and industry. Proud of this success, we renew this year with Autonomia. The primary objective for this event is to bring together actors from the health sector at every levels, to hear and discuss of practices and technologies helping to achieve the goal of an inclusive society.

As a major organization, you can take a stand and help us to empower each individual equally. SAGE-Innovation is then asking for your support to sponsor Autonomia and be a part of this success. You will find the sponsor opportunities on the next page.

On behalf of SAGE-Innovation members, we are very thankful of your consideration in supporting our event. Any support will be appreciated.

Sincerely,

Chantal Michel  
Director SAGE-Innovation
